

**Theo Breitenstein receives the “Energy Engineer of the Year”  
2010 Regional Award from AEE at the World Energy Engineering  
Conference in Washington DC**

**Theo Breitenstein, President and CEO of Emacx Systems, Inc. was named Eastern Region Energy Engineer of the Year by the US Association of Energy Engineers (AEE\*) for his outstanding accomplishments in promoting the practices, principle and procedures of energy engineering in the area of Demand Control and Demand Response Technology.**

Emacx Systems provides cutting edge technology and solutions to reduce energy consumption and peak demand usage. Emacx’s proprietary system is an integrated hardware, wireless I/O and software product that automatically adjusts energy usage throughout a facility for maximum savings and efficiency. The proprietary system incorporates Emacx’s industry experience to control on-site equipment for managing energy demand so that users can leverage rate and incentive program benefits – without disrupting production or compromising quality.

\*AEE is a leading organization in the fields of energy engineering and energy management, renewable and alternative energy, power generation, energy services, sustainability, and all related areas. As a growing professional association, AEE’s overall strength is augmented by its strong membership base of over 13,000 professionals in 81 countries and its widely recognized energy certification programs.
